Some species of flies lay eggs in meat tissue to provide food for the larvae when they hatch. Maggots are fly larvae that emerge from the eggs. Maggots can effectively burrow through and feed on meat due to the anatomy of their mouth parts.

Why Do Maggots Grow on Meat? | Sciencing

California Living Museum (CALM) was founded in 1980 and opened to the public in 1983. CALM exists to display and interpret native California animals and plants for education, conservation and research.

California Living Museum - CALM ZOO

Life is a characteristic that distinguishes physical entities that have biological processes, such as signaling and self-sustaining processes, from those that do not, either because such functions have ceased (they have died), or because they never had such functions and are classified as inanimate. Various forms of life exist, such as plants, animals, fungi, protists, archaea, and bacteria.

Life - Wikipedia

The world's most livable cities is an informal name given to any list of cities as they rank on an annual survey of living conditions. Regions with cities commonly ranked in the top 50 include Canada, Western Europe, Australia, and New Zealand. Three examples of such surveys are Monocle's "Most Liveable Cities Index", the Economist Intelligence Unit's "Global Liveability Ranking", and "Mercer ...
